

## BOTULINUM TOXIN

### Purpose of procedure:

- **Wrinkle reduction:** the toxin is mainly used to smooth out expression (dynamic) wrinkles, such as forehead wrinkles, frown lines (glabellar lines), and crow's feet around the eyes. This is achieved by relaxing the muscles that cause wrinkles, making the skin appear smoother and more youthful.
- **Correcting facial symmetry:** botulinum toxin can also be used to correct facial asymmetry, such as balancing the eyebrows, lips or corners of the mouth.
- **Treatment of excessive sweating (hyperhidrosis):** it is also used to reduce sweating in the armpits, palms and feet by blocking the nerve signals that stimulate the sweat glands.
- **Relief from migraines and muscle tension:** some people benefit from botulinum toxin in relieving chronic migraines and certain muscle spasms (such as in the neck or jaw muscles).
